CEER- Intervention

20th Florence Forum

Florence, 23-24 May 2011

General comments on REMIT: Energy regulators welcome the Commission's proposal, but see strong challenges for an efficient oversight.

Split between

Spot

Derivatives

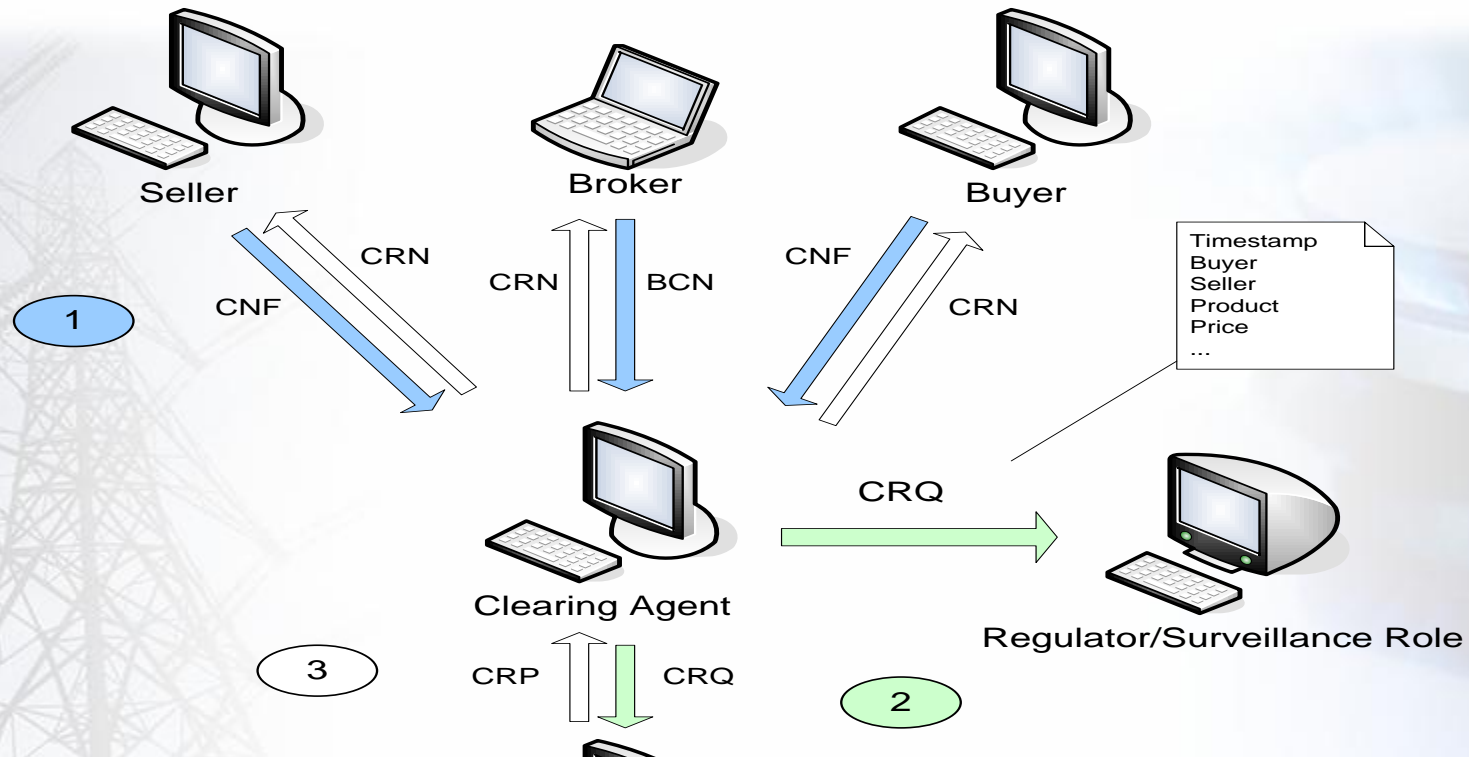

Challenging if energy derivatives would be covered by MAD & MiFID and not be subject to REMIT (due to political compromise).

REMIT: Key challenges (2/3)

The background of the slide features a light blue gradient with faint, stylized power lines and two large, overlapping orange circles positioned behind the central text box.

**Need for an efficient cooperation
between ACER, ESMA and national regulatory
authorities (in some Member States complemented by
the cooperation with other national authorities
on a national basis)**

REMIT: Key challenges (3/3)

**Efficient reporting scheme with reporting of all energy transactions to ACER is needed!
 → Pilot project provides regulators' experiences!**

CEER draft advice recommends a European passport!

Benefits of passport approach;

Reduction of bureaucracy – “One-stop-shop” for traders;

Improved oversight in the EU;

collateral benefits e.g. in the fight against VAT fraud.

Draft advice: Summary

The choice is:

- **Simplified, efficient licensing regime with moderate and harmonised requirements in all Member States, creating a level playing field**
- **OR**
- **Continuation of 29 different and partly very bureaucratic and burdensome national regimes**

Public consultation until 17th June/ CEER workshop on 31st May in Brussels.

The key aspects of the draft advice

One single trading license:

- permits European-wide trading activities;
- issued by the “home” national regulatory authority;
- covers electricity and gas;
- necessary for wholesale trading (not supply);
- trading companies should demonstrate their technical, financial and organisation capacity;
- fees should be cost-based (if any).

The background of the slide is a light blue gradient with a faint, semi-transparent image of a high-voltage electricity pylon on the left and a gas burner with blue flames on the right.

Thank you for your attention!
