

Transparency Workshop

How will the transparency
platform entsoe.net serve the
information needs?

Brussels, 11 October 2010

Evolutionary Process

Why do we need a central platform?

- **Cost efficient**
 - Reliable
 - Data accuracy – to be class leading
- **An industry effort**
 - Builds on work already completed by TSOs
- **Data available to all market participants**
 - Free Service
 - Reduces further barriers to market entry
 - Simple to understand and comprehend

How can this be delivered?

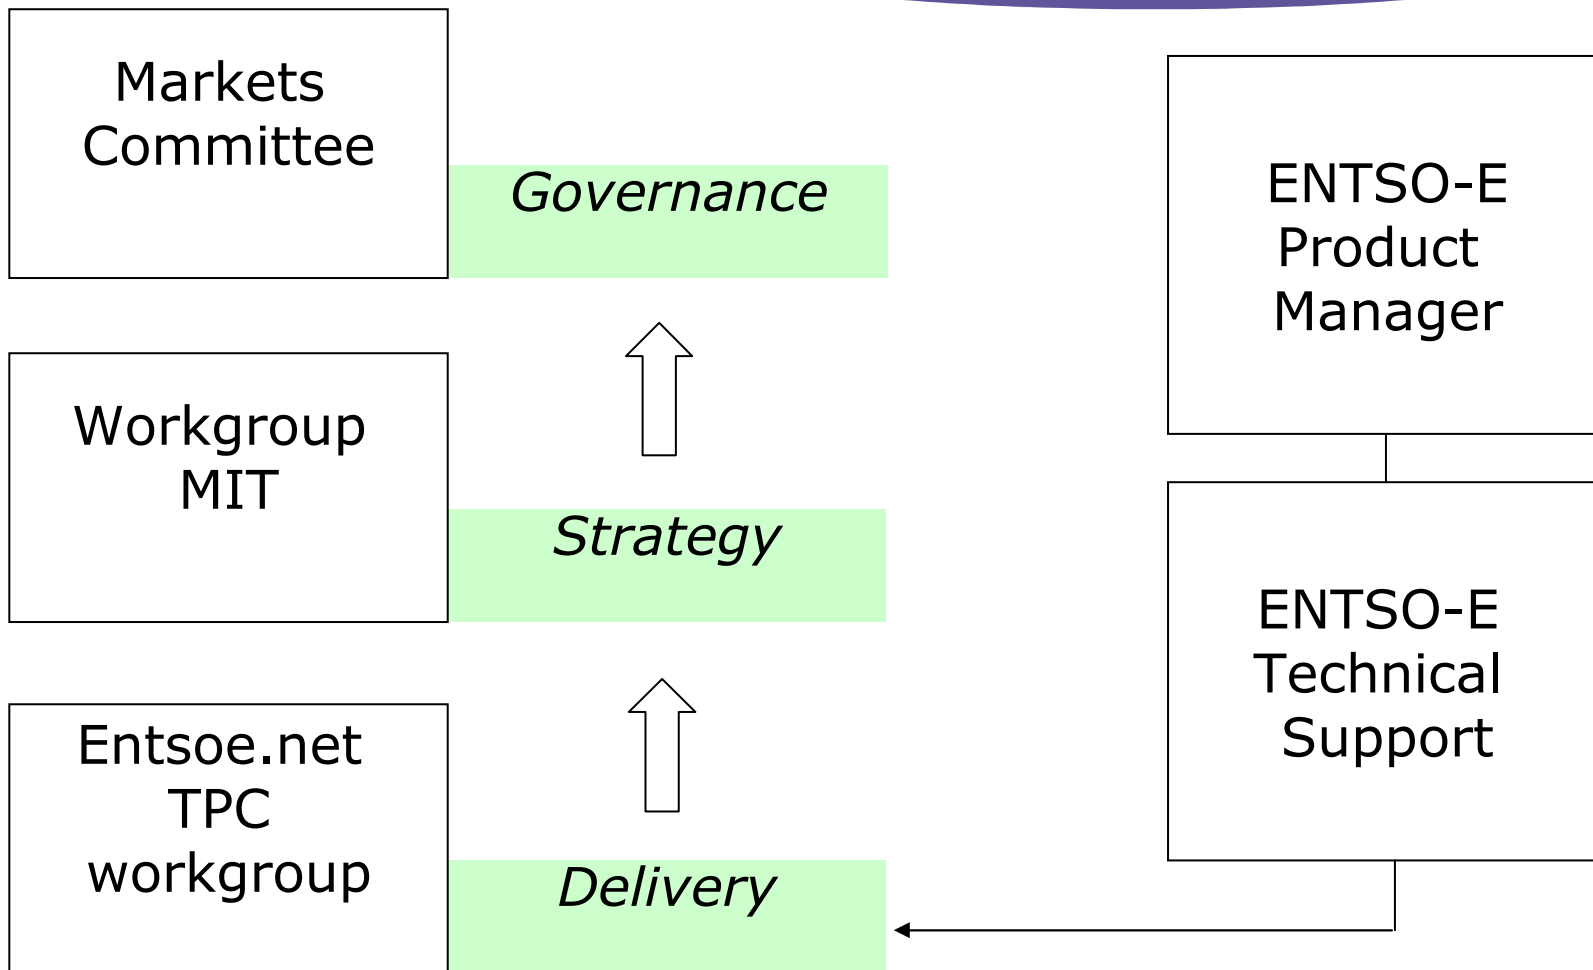

Investment

- ENTSO-E resource commitments and efficient financial investment
- Current call for tender launched last week, for the next few years of the platform development
- Maintenance and support

Stakeholder and Industry Support

- TSOs committed to ENTSO-E
- Will require all other stakeholders (Generators, DSOs) to continually support the development

Platform Delivery within ENTSO-E

Current status and Outlook

- **Data coverage continues to grow**
 - Currently has a record number of data items available
 - Recent improvement of data quality, although further changes to be made shortly
- **Approximately 15 change requests and user functionality improvements underway with current service provider**
- **Outlook remains highly positive**
 - Periodic user surveys to ensure that entsoe.net experience exceeds expectations

Platform Objective

- Entsoe.net aims to become the central information and data platform in Europe for the electricity market.

Thanks for your attention
