

CEER Public Hearing on Customer Data Management

# Accuracy, Accessibility and Non-Discrimination

Brussels, 22 September 2014

Silvia Wild, VKU

# Accuracy, Accessibility and Non-Discrimination

## Key points:

- Legislation / regulation is seen as proper measure to prevent any inaccuracies in data management.
- Common standards for provision to customer of meter data information should be provided at a national level.
- CEDEC agrees that data access should only be provided to a party where it requires that particular customer meter data and has consumer's authorisation.
- In general, a tension between accessibility and data privacy risks for consumers, as well as costs is seen.
- CEDEC also agrees that to support an effective and competitive market, the data management model should not give undue preference to one stakeholder over another.

As key message CEDEC wants to point out that data responsibility should remain with the DSO who will process and store it in a data hub where other, relevant stakeholders have access to it in a non-discriminatory manner.

## Who is CEDEC?

**1500**  
companies

**120 bn €**  
turnover

**350.000**  
employees

**85.000.000** consumers
