

QUALITY OF LIFE

Answers in the questions for stakeholders

General

- We agree that there is sufficient consistency in the common priorities across the regions. Especially, regarding Greece, the efficiency use of the pipeline capacity must be ensured as the gas network is new and it will be extended in the future.
- Yes, we agree that coherence and convergence within regions is a very important step in gas.
- Interconnection of networks and the coherence in the electricity sector is a reality in a big part of Europe. This can be used as a guide in developing gas networks.

Interconnection and capacity

- We are not ready to give an explicit answer in this question.

Transparency

- Yes, the approaches towards transparency are sufficient.
- Yes we consider that would there be benefits in rolling out the note on 'less than 3' in the South –South East region.

Interoperability (including gas balancing)

- We are not sure if the approaches towards interoperability are sufficient enough (see point 51).
- We are not sure if the approaches towards interoperability are sufficient enough (see point 51). Discussion must continue.

Development of gas hubs

- Yes, the approaches towards the development of gas hubs are sufficient.
- No, the more regional approach will not lead to difficulties.

Other issues

- We agree that would there be benefits in the MoU being rolled across the South-South east region.
