

Subject: ERGEG public consultation on fundamental electricity data transparency
Date: 11 October 2010
From: GPX

Dear Mrs. Geitona,

Sorry for my relatively unprepared other comment (still valid in my idea) on last Friday.

The focus of GPX, my company, is on the transparency for consumers regarding the specific energy used from suppliers, and for suppliers to be able to make an ICT trusted connection from certain production via a trusted user account (at supplier) to certain consumption (meter at user) in order to book energy to users that subsequently can claim the use of certain sources of electrical energy.

I now would like to give more accurate comment. This is on question nr 9 from the Consultation Questions for Draft Comitology Guideline on Fundamental Electricity Data Transparency.

9. The draft document suggests that the information on unavailabilities of consumption units is disclosed in an anonymous manner identifying the bidding area, timeframes and unavailable load. Do you consider these pieces of information sufficient for the transparency needs of the internal wholesale electricity market or should also the name of the consumption unit be published?

In the (later on) to be (inter)connected "smart grids", the process of allocation and reconciliation from certain production to certain use of electricity is in need of a good system of coding the production **in order to facilitate electricity transparency for consumers** in making the choice on energy sources.

In order to integrate transparency the ENTSO-E Workshop 11 October 2010 can play a significant role to enable integration of initiatives to identify all production-facilities with a specific number, related to the unique identification of the measurement system for that production facility, in such a way that this may be combined with attached lists ([PRO Fact Sheet 5, release 5.3](#) and [PRO Fact Sheet 5, release 6.0](#)) regarding the types of facilities (load or production). It may be noted that release 6.0 is still to be implemented by AIB members following systems change.

Source for this list: http://www.aib-net.org/portal/page/portal/AIB_HOME/AIB_OPE/EECS/PRO_FACTS

From ebIX in ENTSO-E I understand this domain regarding "Guarantees of Origin" is called a "Certificate Area" and is mentioned a "A Market Area" in document: http://www.ebix.org/Documents/eBIX_EFET_and_ENTSO_E_Harmonised_electricity_model.pdf

Kind regards,

Egbert Bouwhuis
