Why attend CEER Training Courses?

The CEER Training Academy's courses deliver job-related skills for staff of regulatory authorities across all levels, from introductory to advanced. Our modular approach in designing the course programme supports over time the development of professional expertise in energy regulation, covering wholesale market, network and retail/consumer issues. Our course programme is constantly updated to cover new developments and new frameworks in the energy sector, focusing on new challenges for the energy regulators. We have introduced new online and blended formats in our course programme in order to adapt to the changing situation and to offer efficient training solutions that accommodate new and varying learning needs of staff of regulatory authorities. Designed around European practices, the courses also allow for the sharing of regulatory experience and approaches more broadly.

Our trainers come primarily from the regulatory authorities and also from international institutions, academia and the energy industry. The course programme is advised by distinguished members of our Training Academy Advisory Board, comprising senior representatives from the European institutions, academia, the energy industry and former regulators.

“

The CEER Training Academy is where national energy regulatory authorities in Europe go to be trained on the day-to-day job of being an energy regulator. We are also committed to sharing our experiences and expertise with energy regulators from around the world and regulators outside of the energy sector.

Annegret Groebel,
CEER President

THE CEER TRAINING ACADEMY PROGRAMME IS BUILT AROUND THREE KEY FEATURES

1

PRACTITIONER METHOD

Practical topics relating directly to energy regulation for on-the-job and professional development

2

REGULATOR-CENTRIC

Designed and led by regulators for regulators, with exclusive access to leading experts in the energy sector

3

COLLABORATIVE ATMOSPHERE

Exchange views and learn from peers in the regulatory community from across Europe and beyond

“

This training allowed me to have a better understanding on how the National Regulatory Authorities try and find the best appropriate tariff methodology to fix the transmission and distribution costs of their TSOs/DSOs, covering aspects that I had no knowledge on before.

One participant of the [Specialised Training on Network Tariffs for Transmission and Distribution in 2020](#).

“

Highly recommended course and brilliant virtual set up. I enjoyed it very much and even better than a previous course in person. Very well done!

One participant of the [Online Specialised Training on Electricity Market Design and Implementation of the Clean Energy Package in 2020](#).
