Aihe: Consultation on ERGEG Draft Proposal on Guidelines on Inter TSO
Compensation

Dear Sirs,

following the Public Consultation on Guidelines on an Inter-Transmission System Operator compensation mechanism, allow us to express our deep concern relating to the ERGEG draft proposal on Guidelines on Inter TSO Compensation and its impact for Italian SMEs and our Members, particularly concerning the calculation mechanism and considering the risk of over-remuneration in some States.

To this extent we propose that before any implementation of the IMICA mechanism, a specific and preliminary impact assessment analysis could be carried on with the most representative Italian and European SMEs electricity end-users, involving as first interlocutor UEAPME, the European SMEs Organisation, and all the interested actors represented by the European Economic and Social Committee.

We are sure you will consider our overall consideration as a first step to a permanent and more appropriate dialogue towards an harmonized shared solution about the new Inter TSO Compensation mechanism.

We remain at your complete disposal for any further detail,

Best Regards

Tommaso Campanile
